Abstract:

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

CAUTION! CONTRIBUTION

This is an ITU Contribution. It is an internal document to ITU, and it is not to be used outside of ITU.

[Your text starts here.

Before submitting this document:

- Update the information in the document attributes: document number (n), Question(s), source, title, contact information and abstract.
- Make sure that the title and the source or sources inserted in your Contribution (word document) are the same inserted in the DDP online form.
- If you need more contact information rows, keep adding attributes with an incrementing number (fullname_3, fullname_4, fullname_5 etc.)
- Remove this text.

Recommendation ITU-T W.3000 (fictitious)

Template for an ITU Recommendation or other document, which is the subject matter of a Revision Contribution

Summary

The summary goes here.

Keywords

Authoring, metanorma, recommendation, template.

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

CAUTION! PREPUBLISHED RECOMMENDATION

This prepublication is an unedited version of a recently approved Recommendation. It will be replaced by the published version after editing. Therefore, there will be differences between this prepublication and the published version.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

Draft new Recommendation ITU-T W.3000 (fictitious)

Template for an ITU Recommendation or other document, which is the subject matter of a Revision Contribution

1. Scope

This Recommendation provides a set of common, coherent and portable signal processing tools to facilitate the development of speech and audio coding algorithms, in particular within the standardization environment, where the following situations often happen:

- experimental results generated with different software tools may not be directly compared;
- software tools used by different organizations may not perfectly conform to related ITU T Recommendations, which may delay ITU-T standardization processes;
- ITU-T Recommendations may leave scope for different implementations;
- new speech and audio coding standards are increasing in complexity, leading to non bitexact specifications; furthermore, appropriate testing procedures to assure interoperability of different implementations are needed.

2. References

The following ITU-T Recommendations and other references contain provisions which, through reference in this text, constitute provisions of this Recommendation. At the time of publication, the editions indicated were valid. All Recommendations and other references are subject to revision; users of this Recommendation are therefore encouraged to investigate the possibility of applying the most recent edition of the Recommendations and other references listed below. A list of the currently valid ITU-T Recommendations is regularly published. The reference to a document within this Recommendation does not give it, as a stand-alone document, the status of a Recommendation.

[ITU-T H.780]	Recommendation ITU-T H.780, <i>Digital signage: Service requirements and IPTV-based architecture</i> , First edition.
[ITU-T P.56]	Recommendation ITU-T P.56, <i>Objective measurement of active speech level</i> , Fifth edition.
[ISO 3166-1]	ISO 3166-1, <i>Codes for the representation of names of countries and their subdivisions — Part 1: Country code</i> , Fourth edition.
[W3C XMLSchema]	W3C XMLSchema, W3C Recommendation (2004), <i>XML Schema Part 2: Datatypes Second Edition</i> .

3. Definitions

3.1. Terms defined elsewhere

This Recommendation uses the following terms defined elsewhere:

3.1.1. playlist: [\[ITU-T H.780\]](#): Composed of a list of contents.

NOTE – This data is created and provided by digital service providers.

3.1.2. metadata: [\[ITU-T X.1255\]](#): Structured information that pertains to the identity of users, systems, services, processes, resources, information or other entities.

3.2. Terms defined in this recommendation

This Recommendation defines the following terms:

- 3.2.1. region:** A partial area of the screen layout to be a content displayed.
- 3.2.2. screen layout:** A composition of one or more regions to be content displayed.

4. Abbreviations and acronyms

This Recommendation uses the following abbreviations and acronyms:

DS	Digital Signage
GML	Geography Markup Language
URI	Uniform Resource Identifier

5. Conventions

This Recommendation follows the notation described in clause 6 of [\[ITU-T H.780\]](#). The notation is used in this Recommendation to facilitate the specification of the corresponding schema:

- *Definition/Semantics:* definition and semantics of the element / attribute along with notes and value domain;
- *Type:* describes the type of the pertaining instance as defined in [Table 1](#).

[Table 1](#) contains data types used in this Recommendation; alternative representations may be shown which illustrates other data structures. In case of discrepancy with any alternative representation, the correct information is to be found in [Table 1](#).

Table 1 — Data types used in this Recommendation

Type	Name	Notes/Reference
iso:countryCode	Country Code	Used to specify country code. Defined in [ISO 3166-1] .
gml:Point	GML point	Used to specify simple point geometry in format of geography markup language (GML). A point consists of a <Point> element with a child <coords> element. Within <coords> the latitude and longitude values are separated by a space. Defined in [ISO 19136] .
xs:anyURI	URI	Used to specify uniform resource identifier (URI). Defined in [W3C XMLSchema] .

6. Clause 6 of the Recommendation

6.1. General

Here's where you place your main content.

6.2. Data models

The following data models are used by other data models specified in this document.

Annex A

Annex Title

(This annex forms an integral part of this Recommendation.)

Body of Annex A.

Appendix I

Appendix Title

(This appendix does not form an integral part of this Recommendation.)

Body of Appendix I.
